Finding libraries that hold this item... This test method covers the determination of bulk specific gravity (Gmb) of compacted bituminous mixtures. This method can be used with samples that contain open or interconnecting voids or absorb more than 2.0 percent water by volume, or both. Note 1 - Water absorption by volume is determined using T 166; this specification does not contain a direct determination of the water absorption by volume. The bulk specific gravity of the compacted bituminous mixtures may be used in calculating the unit mass of the mixture. Shipping Within 2 hours on business days Media format PDF Language English ISBN 9781560516668 These specifications cover the design, evaluation, and rehabilitation of highway bridges. The design provisions of these specifications employ the Load and Resistance Factor Design (LRFD) methodology, which is based on structural reliability theory, and calibrated to achieve a target level of reliability. Updates to this edition include: A completely updated and revised Section 5 on Concrete Structures (Appendix E5, comparing the 7th and 8th Edition versions of this Section can be downloaded below) New, simplified steel girder splice design provisions Updated Section 7 on Aluminum Structures Guidance on the design and fit of steel cross frames 9781560516545, 978-1-56051-654-5, AASHTO LRFD-8 Title Page Changed and Deleted Articles, 2017 Preface and Abbreviated Table of Contents Section 1.
